SUMMARY

Backend-focused software engineer and incoming MS Computer Science student at Northeastern University (Khoury), specializing in distributed systems. Builds production-grade, concurrency-safe services in Java and Spring Boot, with strong data-structures and algorithms foundations from competitive programming.

EDUCATION

Northeastern University, Khoury College of Computer Sciences — Boston, MA

Master of Science in Computer Science (Distributed Systems) — In progress

Sri Krishna College of Engineering and Technology — Coimbatore, India

B.Tech, Information Technology — CGPA 7.9

EXPERIENCE

Software Engineering Intern — Accenture, Bangalore

Cloud automation

- Built cloud automation workflows on AWS using Lambda and SQS to streamline backend processing.
- Worked across backend services with an emphasis on reliability and event-driven patterns.

PROJECTS

Payment Ledger — Event-Driven Money Movement (Java, Spring Boot, MySQL)

- Double-entry ledger with idempotent, atomic transfers; pessimistic locking with deterministic ordering and optimistic versioning for concurrency safety.
- Integer minor-unit balances, transactional outbox with scheduled relay, and JWT-based authentication with method-level authorization.

Order Processing System — Event-Driven Microservices (Spring Boot, Kafka, Redis, Docker)

- Decoupled order intake from fulfillment via Kafka events; downstream inventory, payment, and notification services process asynchronously.
- Redis for caching and idempotency; Docker for containerized local orchestration.

TECHNICAL SKILLS

Languages	Java, Python, C++, JavaScript, SQL
Backend	Spring Boot, Spring Security (JWT), REST APIs, JPA/Hibernate
Data & Infra	MySQL, Redis, Apache Kafka, Docker, AWS (Lambda, SQS)
Frontend	React, HTML/CSS
CS Foundations	Data Structures & Algorithms (LeetCode Knight, 1000+ solved), Distributed Systems
